sudo halt
sudo reboot
sudo chown sandy file1.txt

Linux cmnts

```
sudo chown -R sandy file1.txt
sudo chgrp students file1.txt
less file1.txt
free
top
aspell check file1.txt
cmp
comm filoe1.txt file2.txt
sudo dnf install git
tar -cvf backup.tar myfolder
tar -xvf backup.tar
ssh 192.168.1.10
nslookup
ssh < master's ip >
ssh <slave's ip >
```

Example/Usage
files list pannum
long format
file owner information
html files only
going to document directory
home directory-ki pogum
root directory-ki pogum
parent directoryki pogum
shows current directory
display Hello in output
root user ku switch pannum
varun userku switch pannum
create new user as santhosh
santhosh user-ku password set panna
santhosh user delete panna
student group create pannum
student group delete panna
cp file1.txt file2.txt
overwrite confirmation
cp -r folder1 folder2 -directory recursive ahh copy panna
cp -v file1.txt folder/ copy details-a katum
mv file1.txt documents/ file-a document ku move pannum
rm file1.txt file-a delete pannu
non empty directory-a delete pannumr
parent + chile directory-a delete pannum
rm -rp folder1 parent/subdirectories include delete panna
sepcific word irrukuratha search pannum
case insensitive
grep -v "hello" hello illataha lines ahh show pannum
file contents ahh display pannum
sort file1.txt file kulla irruka contents ahh sort pannum
mkdir demo means folder create panna
permission set panna
nano file1.txt file editor
vi file1.txt vim editor
current user's pass change panna
touch file1.txt
disk partition space pala
human readable
zip new_file.zip file1.txt
host name katum
IP Address katum
running cmnt safely stop panna
forcestop
line,word char cont pannum
power off
reboot
file1.txt owner-a sandy-ki change panna

Linux cmnts

folder+ulla irruka contents ku owner change pannum
file grp-a students ku change pannum
file-a page by page browse pannum
free and used memory katum
cpu processinfo katum
file la irruka contents oda sppellin check p-annum crct-um pannala
2 files ahh compare pannum
sorted file-a line by line compare pannum
fedora
myfolder-ahh backup.tar ahh create pannum
backup.tar-ahh extract pannum
remote machine ku ssh ahh connect pannum
query the nameserver for the ip address of the given Host optionally using a specified DNS
the cmnt ,on running at the master,will give remote access to the slave node
slave node
